

# ACTIVITON

MULTI  
SPECIES

## SOLUTION FOR OPTIMAL NUTRIENT SUPPLY

- + Balanced combination of vitamins, trace elements and amino acids
- + Positive effects on growth and health
- + Support of immune system

## SOLUTION FOR OPTIMAL NUTRIENT SUPPLY

### Mode of action

**Activiton** is a well-balanced combination of vitamins, amino acids and trace minerals for short term supplementation via drinking water for all animal species. During the production cycles of commercial livestock the needs for maintenance, growth and reproduction are changing.

A sufficient nutrient and vitamin intake is indispensable for optimal performance and hence increased economy.

**Activiton** helps to compensate deficiencies in order to support:

-  Fertility
-  Immunity
-  Growth
-  Feathers and skin

**Activiton** is especially indicated for support of oestrus and reproduction. It can be used for prevention of hypovitaminosis, amino acid and trace mineral deficiencies after vaccination, subclinical diseases, changes of feed composition and other stress involving conditions. The supplementation via drinking water ensures easy handling and a quick response.

### Package size

1 liter bottle and 5 liter canister
