

LIQUI**SHINE**

POULTRY

DESIGNED TO IMPROVE RESISTANCE OF SKIN AND MUCOSA

- ⊕ Improves feathering, skin condition and foot pad health
- ⊕ Supports efficacy of medication and vaccination
- ⊕ Prevents dehydration

LIQUISHINE

YOUR SOLUTION FOR HEALTHIER SKIN AND BRILLIANT FEATHERS

Mode of action

LiquiShine has been developed to promote resistance and integrity of skin and mucosal membranes. Wet litter, skin lesions and a weakened immune system can lead to foot pad dermatitis, affecting animal welfare and consequently meat quality. A supplementation of trace minerals, biotin and betaine can help to meet the increased needs of affected flocks or those that go through the molting process.

In the formulation of **LiquiShine**, a special focus is given to zinc, a trace element that is known to be essential for the function of skin and mucosa, various enzymes as well as the immune system.

Both Biotin and Methionine are needed for keratin synthesis, a structural protein that is a key material of epithelial cells as well as feathers. A deficiency is linked to poor feathering and skin disorders.

Betaine prevents dehydration by its function as an osmoprotectant. It retains water in the cells of the gut wall, whereby water content of feces and water loss via feces are reduced. Fecal consistency is improved.

LiquiShine supports your flock:

- ✚ During and after vaccination
- ✚ In times of higher risk for foot pad dermatitis
- ✚ During molt

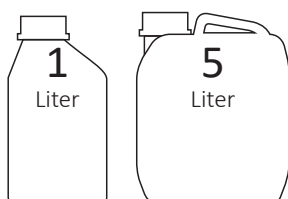

LiquiShine supports the function and integrity of skin, feathers and immunity. Its combination of chosen ingredients helps to increase the performance of your animals.

Package size

1 liter bottle and 5 liter canister

Storage stability

Store in a cool and dry place. Protect from direct sunlight, close package after usage.
